Lab report

Submitted by

Alok

Roll No. 220101048

Semester - 5

3rd Year - CSE (Section A)

Department of Computer Science and Engineering

**Indian Institute of Information Technology
Manipur**

Imphal, India - 795002

21 August 2024

1. Write a program in Lex to identify “real precision” of a given number.

Program:

```
%{
#include<stdio.h>
void precision(char*numstr);
%}

%%
[0-9]*.[0-9]+ { precision(yytext);
//          printf("Hey");
}

. {}
%%
void precision(char*numstr)
{
    char*temp=numstr;
    int len=0,num=0;float round;
    while(*temp!='.')
    {
        num=num*10+((*temp)-48);
        temp++;len++;
    }
    printf("Rounded Num: %d, Precision: %d",num,len);
}
int yywrap(){ }
int main()
{
    yylex();
return 0;
}
```

OUTPUT:

```
iitmanipur@iitmanipur-HP-ProDesk-600-G4-SFF:~/Alok/CompilerLab$ ./Lab5a.out
65.32
Rounded Num: 65, Precision: 2
34.14
Rounded Num: 34, Precision: 2
```

2. Write a program to implement the elimination of left recursion. (using C++)

Program:

```
#include<iostream>
#include<string>
#include<algorithm>
#include<vector>

using namespace std;
void eliminate_left_recursion(string&ip)
{
    size_t pos=ip.find("->");
    string left=ip.substr(0,pos);
    string right=ip.substr(pos+2);
    vector<string>right_parts;
    int start=0;
    while(true)
    {
        int end=right.find('|',start);
        if(end==string::npos)
        {
            right_parts.push_back(right.substr(start));
            break;
        }
        right_parts.push_back(right.substr(start,end-start));
        start=end+1;
    }
    vector<string>productions;
    bool has_left_recursion=false;
    for(auto part:right_parts)
    {
        if(part.find(left)==0){
            has_left_recursion=true;
            productions.push_back(left+"->" +part.substr(left.length())+ left+""");
        }
        else{
            productions.push_back(left+"->" +part+left+""");
        }
    }
    if(has_left_recursion)
    {
        productions.push_back(left+"->ε");
    }
    if(has_left_recursion)
        cout<<"Left Recursion Present"<<endl;
    for(auto prod:productions)
        cout<<prod<<endl;
}

return;
}

int main()
{
    string ip;
    getline(cin,ip);
```

```
        string::iterator it=ip.begin();
        eliminate_left_recursion(ip);
return 0;
}
```

OUTPUT:

```
iitmanipur@iitmanipur-HP-ProDesk-600-G4-SFF:~/Alok/CompilerLab$ g++ Lab5b.cpp
^[[Aiiitmanipur@iitmanipur-HP-ProDesk-600-G4-SFF:~/Alok/CompilerL./a.out
A->Aop|r
Left Recursion Present
A->opA'
A' ->rA'
A' ->ε
```
